

IHM eMedical Record (Telemedicine)

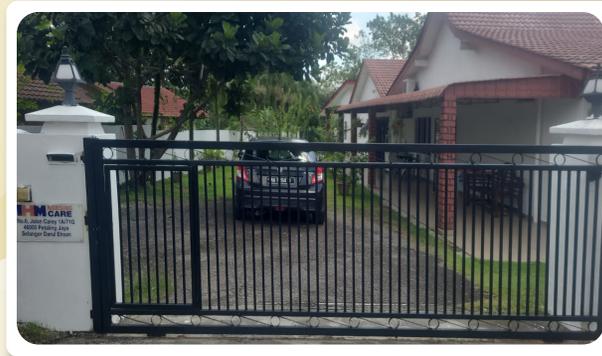

As a leader in healthcare management, IHM is continuously improving its IT infrastructure to cater for its members' needs. IHM panel hospitals and clinics can now retrieve and store the medical records of our members via the eMedical Records at our website (www.ihm.com.my).

The storing of members' electronic medical records is vital because:-

1. In the event of any medical emergencies, the treating doctor can instantly retrieve the members' medical records anywhere in the world. This includes past medical history, annual medical examination, blood profile report, in-patient and out-patient records, existing medical condition, and previous drug and medication prescriptions. Such information is vital for the treating doctor to diagnose the illness accurately, and also administer the correct medication to avoid any adverse drug reaction.
2. Members with existing medical condition and/or currently on medication can retrieve their medical records to obtain similar medication from pharmacies, clinics or hospitals.
3. Finally, members seeking for second medical opinions from overseas hospitals and clinics can retrieve the required medical records online, without the hassle of bringing the hard copies of their medical records along.
